

Emergency Instructions For Gas, Electricity, and Water

GAS:

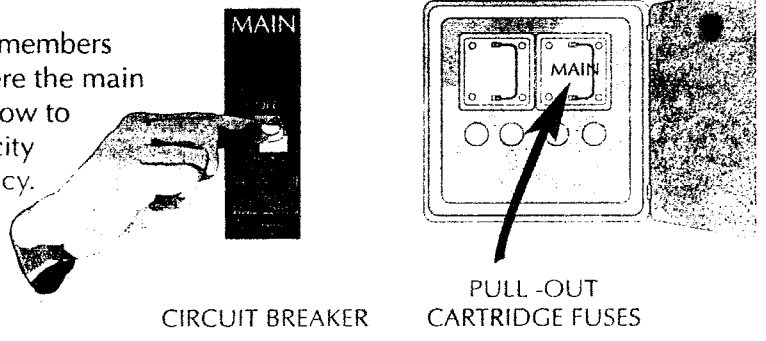

Learn how to shut off gas:
(do so only in an emergency)

- The main shut-off valve is located next to your meter on the inlet gas pipe.
- Use a wrench and give it a quarter turn in either direction so that it runs horizontally on the pipe. The line is now closed.

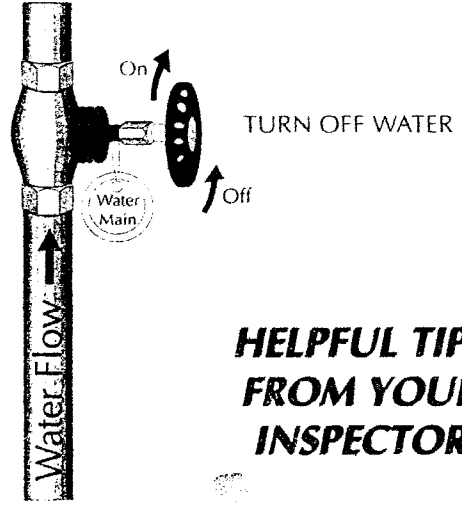

ELECTRICITY:

Teach responsible members of your family where the main switches are and how to turn off the electricity in case of emergency.

WATER:

The water shut-off valve is usually found where water enters the house. Also the main shut-off valve can sometimes be found with the meter in a concrete box at the sidewalk. In case of emergency turn the valve clockwise to shut the water off.
